

## Now Brewing... Font Awesome 6 Alpha!

The next generation of our icon library + toolkit is coming with [more icons](#), [more styles](#), [more services](#), and [more awesome](#). Pre-order now to get access to our [alpha](#) and future releases!

 [Get the Alpha!](#)

 [Learn More!](#)

# Font Awesome 5 Pro's Cheatsheet

After you're set up on the [desktop](#) or in [code](#), quickly copy and paste the glyph, name, or unicode value of any icon.

### FYI, Duotone Icons Contain 2 Layers!

If you're using unicode values to render icons, like with [CSS pseudo-elements](#), you'll need to use the incode value for each layer. We're showing the rendering of each layer below and the corresponding unicode value separately. It may be a good idea to [brush up on duotone icon use and options](#) if you're not too familiar with them yet.

## Duotone Icons

## On the Web

After following our [SVG with JS](#) or [Web Fonts with CSS](#) steps, you can copy any icon's name here and paste it into our standard markup. Using [CSS pseudo-elements](#)? Copy and paste the unicode value into your specific CSS rule.

## On the Desktop

After following our [desktop get started steps](#), you can copy any icon's name here and paste it into a text field and let ligatures do the rest of the work (when supported by your desktop app). Or you can also copy and paste the icon (not the unicode) directly from this page into a text layer.
